

# EAT XML Gate API Documentation

## Hotel Static Contracts

### Version 1.1

Updated at 2015-08-26

#### Basic information

EAT XML Gate API allow to search, book and cancel content.

For common integration you need to get next parameters:

API URL - url to send HTTP requests;

Username - registered in system username (please ask special username for online);

Password - valid password for specified username;

Gate ID - gate identifier (also known gate hash).

All requests you should send on API URL in POST parameter xml\_request.

Request name you should always put into root tag, then first should be **auth** data in next format:

```
<auth>
<username>username</username>
<password>password</password>
<gateid>gate_id</gateid>
</auth>
```

All options (if required) you need to place in **options** tag.

You may need such options:

response\_format - can be xml or json (we recommend JSON, because it is faster);

response\_culture - language of output, can be en (english) and ru (russian), english - by default;

price\_source - public by default, when you use gate locally - you can specify local - to avoid publication scan.

Other options are depends on request and will be described in proper part of document.

Here is example of available contracts request:

```
<?xml version="1.0" encoding="utf-8"?>
<available_hotel_contracts_request>
<auth>
<username>username</username>
<password>password</password>
<gateid>gate_id</gateid>
</auth>
<options>
<response_format>xml</response_format>
<response_culture>en</response_culture>
<price_source>public</price_source>
<country>17</country>
<date_stay_from>2015-06-13</date_from>
<date_stay_to>2015-12-23</date_to>
<updated_from>2015-08-15 00:00:00</from>
</options>
</available_hotel_contracts_request>
```

#### Static Contracts Request

Here is a simple request for all available contracts in system.

```
<?xml version="1.0" encoding="utf-8"?>
<available_hotel_contracts_request>
<auth>
<username>username</username>
<password>password</password>
<gateid>gate_id</gateid>
</auth>
<options>
<response_format>xml</response_format>
<response_culture>en</response_culture>
</options>
</available_hotel_contracts_request>
```

In option section you can specify next options:

city – id of requested city;

country – id of requested country;

updated\_from – last date of update (will show only contracts updated after that data and time);

date\_stay\_from/date\_stay\_to – can be used both or only one of them to filter contracts by dates.  
All above options are optional and using for filtering content.

Response example:

```
<?xml version="1.0" encoding="utf-8"?>
<available_hotel_contracts_response>
<info server="EAT" time="1.6128" version="1.1.0" user_ip="192.168.176.4"/>

</contract>
</contracts>
</data>
</available_hotel_contracts_response>
```

Here is tags explanation:

contract\_id – by this contract id you can get full price;

contract\_ref\_id – every time hotel rates updating – contract\_id is changing, but this parameter refers to source rates contract, so you can use it for reference;

hotel\_id – local id of hotel;

hotel\_name — full name of hotel;

hotel\_category – category of hotel;  
city\_id – city id where hotel located;  
city\_name – city name where hotel located;  
date\_from – start of rates;  
date\_to – end of rates;  
date\_booking\_from/date\_booking\_to – hotel validity of booking (if empty no limitation);  
updated\_at – date of update.

## Rates request

To request rates use next example:

```
<?xml version="1.0" encoding="utf-8"?>
<hotel_contract_request>
<auth>
<username>username</username>
<password>password</password>
<gateid>gate_id</gateid>
</auth>
<options>
<response_format>xml</response_format>
<contract>228524</contract>
</options>
</hotel_contract_request>
```

In options statement you need to specify contract with contract id or hotel with hotel id inside.

Response example:

```
<?xml version="1.0" encoding="utf-8"?>
